

GreenPlan Cloud Update

We're pleased to announce the release of **GreenPlan Cloud** with an update related to user access control. It will be released on January 19, 2026.

New feature

- **User access control**

We have implemented user-based access control to ensure that users only have access to the data necessary for them.

Access rights can be configured at a **location level**, allowing users to have view-only access or data editing rights for specific locations, depending on authorization levels.

All existing users will be set up as admin with access to all locations, so no one will lack access when we publish. All new users who come on will not have access to any locations until an admin gives them access or makes them admin.

You find user access control under User in Settings

We're constantly working to enhance performance, security, and user experience. This update is part of our ongoing effort to improve our software.
